

## A MYOPIC HISTORY OF INFRASOUND SENSORS

*Daniel L. Osborne*

Wilson Infrasound Observatories  
Geophysical Institute  
University of Alaska Fairbanks  
Fairbanks, Alaska

Throw a few good scientists into a World War One trench, give them poor equipment and the order to locate the enemy's guns by sound waves, add some desperation, and the result is invention. We detail a few selected steps of the development of infrasound sensors from the earliest electronic sensors of ~1914 to the present time. Furthermore, we describe a few features, advantages, and disadvantages of some the old infrasound sensors, as well as some more modern infrasound sensors.
