When your infrasound site is miles from anywhere, you need to know you can count on your sensor to work at any field location. Just plug it in.

Introducing our ultra-light, super-small **Model 60**: fits in the palm of your hand, weighs 7 oz, and uses less than 150 mW of power.

It also has the robust build quality, low noise, high dynamic range, and traceable calibration that people expect from Chaparral Physics sensors.

Our sensors have very low seismic sensitivity, and our Model 50A is IMS certified. Chaparral Physics sensors are proven to work in all environments – from the rainforest to high desert to Antarctica.

Models available with customizable sensitivity, including the 25Vx, designed to handle high-amplitude pressure waves up to 720 Pa. Contact us for your customization needs.
